Full Stack developer

Do you have experience in C#, .NET core, Typescript, React, and REST API? Are you looking for a position in a fast-growing company that is pushing the digital transformation in the industry? Then join us!

Who you are

You have at least 3 years of experience with .NET Framework, C#, and experience in writing and releasing Windows app installs and Web APIs. You also have skills in Entity Framework, SQL Server, and webclient development in JavaScript or TypeScript. You are collaborative, enjoy challenging tasks and are used to taking initiative.

It is even better if you hold skills in Python, algorithm optimization, Jupyter, ClickOnce installation, and Microsoft Azure.

Your Role

At Viking Analytics, you will work in the development of MultiViz, our self-service advanced analytics solution to heavy industries. Along with our talented team of developers, you'll use the latest techniques to develop a range of different applications for some of the world's largest organizations as well as for small fast-moving companies.

Who we are

Founded in 2017, Viking Analytics help asset-heavy companies to predict and prevent expensive machine downtimes and performance degradations of their processes and assets. Our core offering is MultiViz, a self-service advanced analytics software that allows users to prepare, analyze and process large volumes of sensor data without being a data scientist.

As a fast-growing startup we welcome new and experienced professionals that wish to actively become part of the industry 4.0 and AI revolution and accelerate our clients' digital transformation.

Our offer

We offer full-time employment with competitive salary and paid time off. You will also enjoy the perks of being part of one of the most exciting startups in Gothenburg and working with highly talented people who are extremely passionate about their craft. At

our office located at the Lindholmen Science Park, you will find an environment that encourages initiative and leadership.
