# Senior Python developer

Are you an experienced Python developer? Do you enjoy solving architectural challenges for a wide range of services and systems? Are you looking for a position in a fast-growing company that is pushing the digital transformation in the industry? Then join us!

## Who you are

You have at least 5 years of industry experience with Python and proven skills in code architecture, optimization and debugging, and robust computer science fundamentals. You also bring to the table a strong motivation to drive impact by making product or infrastructure improvements and have experience in continuous delivery model. You are proactive, a fast-learner and have good communication.

It is even better if you hold experience in even driven programming and micro-services in Python and message brokers such as RabbitMQ.

## Your Role

At Viking Analytics, you will work along with clients, senior management, and cross functional teams in activities such as:

- Leading complex programming tasks and performing code reviews
- Helping us with software architectural challenges for a wide range of services and systems
- Staying up to date with the latest technologies to ensure we are always using the best practices
- Collaborating with DevOps teams to participate in, validate, and evolve how we build, test, and deploy code

## Who we are

Viking Analytics is a fast-growing company that enables the industry 4.0 with AI. We help asset-heavy companies to predict and prevent expensive machine downtime and performance degradation of their processes and assets. During the last two years we have developed the data exploration tool MultiViz and the ML deployment tool Daeploy. We are focused on implementing scalable solutions while consistently improving our value proposition to the industry – reducing the deployment cost and time and improving the usability.
